Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 July 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 10-11 and 14 are rejected under 35 U.S.C. 102(a) as being anticipated by Fujiwara (JP 2002-219832).

With respect to claim 10, Fujiwara discloses a printer unit including a base section 4 of a printer, a guide path which guides paper as shown by paper 2 in Figure 12 of Fujiwara, a printing section having a platen 6 and a printhead 5 located opposite to each other with the guide path interposed therebetween. Further disclosed is a cutter section which includes a stationary blade 13 and a movable blade 12 located opposite to each other with the guide path interposed therebetween (see Figure 12 of Fujiwara); the printed paper being cut by engaging the movable blade 12 with the stationary blade 13. Also disclosed is a first unit and a second unit as shown below:

Fig. 13

The first unit is supported at the base section 4 and is located on one side of the guide path and includes the printhead 5 and the stationary blade 13. The second unit is provided completely separate from the base section as shown above and is located on the other side of the guide path. The second unit includes the platen 6 and the movable blade 12. Additionally, Fujiwara discloses a connecting mechanism 6a,92 which removably connects the second unit to the first unit such that the first unit supports the second unit and such that the printing section and the cutter section are operable when the second unit is connected to the first unit (Figure 13, see patent family member US 6,831,670, col. 17, lines 19-38 for an English description).

With respect to claim 11, the base unit removably supports the first unit because any structure that was assembled in order to be a unit can also be disassembled.

With respect to claim 14, Fujiwara discloses a movable blade holding section 20, 31d as shown in Figure 15. Since the movable blade 12 was attached to holding section 20,31d it must inherently also be detachable or removable.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 12-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fujiwara (JP 2002-219832).

With respect to claim 12, Fujiwara discloses the claimed printer unit except that is not clear if a plurality of shaft support sections are disclosed. Fujiwara discloses a connecting mechanism including a connecting shaft 6a on the second unit that is orthogonal to a guide direction along which the paper is guided. The shaft would extend from both ends of the platen and can be considered to be two shafts. Fujiwara further discloses a shaft support section 92 which is provided on the first unit as shown in Figure 13. The connection shaft 6a is fitted into the support section 92 when the second unit is connected to the first unit. It would have been obvious to provide additional shaft support sections because it is obvious to provide more of the same structure for carrying out the same function. In this case, it would have been obvious to combine an additional support section 92 on the opposite side of the platen in order to provide a symmetrical balance of forces acting on the printing section.

With respect to claim 13, Fujiwara discloses that the platen 6 includes a paper support section (as shown in Figure 13) which supports the paper and a support shaft 6a that extends from both ends of the paper support section to serve as one of the connecting shafts.

Response to Arguments

5. Applicant's arguments with respect to claims 10-14 have been considered but are moot in view of the new ground(s) of rejection.
